

# Sergei Volkov

*Data analyst/Python developer with an academic background in limnology and hydrophysics, passionate about automation. A long-term fan and user of Linux, Vim, and open-source software. I write efficient code to collect data from APIs, load it into databases, analyze, visualize, and create automated reports with Tableau or other BI tools. I prepare and analyze AB tests, check hypotheses, and describe the research to stakeholders. I value reproducibility (in computing and research), keeping information version-controlled, and writing concurrent, easy-to-read code.*

Feb 2024 Software development, Software architecture, Product design, Project management, Testing, Team leading

- Set up CI/CD and coding conventions
  - Designed AWS architecture for IoT, web app, service DB, and ETL
  - Developed various Python and Bash scripts
  - Created IoT showcase with virtual clients in Python and MQTT broker in separate Docker containers
- I was hired to build an ETL for collecting data from smart lamps for greenhouses. However, upon my arrival, a complete redesign of the AWS architecture was necessary, which I made but eventually it was canceled. My employment ended when the company decided to switch to a self-hosted solution from cloud-based.*

Jun 2021 – **PhD Student, Leibniz-Institut für Gewässerökologie und Binnenfischerei (IGB Berlin)**

Mar 2023 Research design, Data processing, Fieldwork, DevOps, Academic writing and editing

- Analyzed various data, conducted research, and published papers
  - Created complex environments for the MATLAB package (OpenCV and mexopencv built with CMake in Docker, GUI on host machine with remote X session)
  - Developed Python computer vision programs and ad-hoc data wrangling frameworks
  - Organized fieldwork and participated in lab work
  - Administered remote Linux servers
- Focused on the hydrophysical aspect of a joint limnological project, with an emphasis on biomass sinking, degradation, and the carbon cycle.*

- Oct 2020 – **Data QA, Playrix**  
 Feb 2023 Data analysis, Validation, ETL design, Manual and automated QA
- Wrote complex SQL (various dialects) queries and scripts in Python and PySpark
  - Worked with Big Data
  - Developed automated data quality evaluation methods
  - Implemented several BI algorithms in SQL and Python
  - Designed methods for creating ad-hoc data validation SQL queries with metaprogramming
  - Managed QA section of the project and led QA team
  - Designed and verified BI dashboards
- Hired by the data engineering team to check the legacy ETL data and conduct data quality control during migration to a new ETL. Later, responsibilities included developing Tableau dashboards and their sources, and consulting developers on calculating different metrics.*
- Mar 2020 – **QA Engineer, Playrix**  
 Oct 2020 Manual QA, Automation, Teaching, Testing documentation writing, MitM traffic sniffing, Statistical analysis
- Mocked package loss and network random latency by proxying traffic on a Linux host
  - Data-driven checking of random-based algorithms
  - Developed a Python script for TestRail API
